- MySQL, MongoDB, and other databases

WORK EXPERIENCE

bitFit, Inc.

Full Stack JavaScript Developer (Node.js/React.js) / Team Lead / April 2017 - Present

As the team lead of a startup I have several hats that I need to wear constantly. My main reposibilities are to manage SaaS platform development and improvements in addition to fully managing all SaaS customers and partners (Netflix, Comcast, AT&T, GreenDot, and SendGrid just to name a few). I also successfully implemented solutions for customer requirements including developing additional functionality in the bitFit product and supporting all the required integrations (Workday, ServiceNow, Zendesk, etc.) to help them resolve their internal issues using the latest SaaS technology and combination of integrations.

Netflix, Inc. - Primary Enterprise SaaS Customer

Javascript Development

- SaaS Product Development - Node.js, React.js, HTML5, LESS/SASS
- In-app messenger integration and configuration - Smooch API, Slack API, Node.js
- Slack notification development and configuration per client – JavaScript, Slack API
- Kiosk ticketing module development - HTML5, CSS3, React.js, ServiceNow API
- Custom dashboard module - HTML5, CSS3, React.js
- Company website re-design and development - HTML5, CSS3, JavaScript, jQuery, PHP, WordPress
- ServiceNow native application development - HTML5, CSS3, JavaScript, jQuery, ServiceNow API

Technical Program Manager

- Work with Netflix stakeholders across multiple departments to improve and automate day-to-day operations
- Have recurring monthly meetings to hear each team's goals and issues

- Identify areas to be improved and automated, find solutions, propose solutions, schedule development, manage development, deliver final results to teams for approval

Management
- New customer onboarding
- Coached new customer teams about bitFit products and modules
- Customer relationship management and building solutions that meet customer goals
- Customer program development
- On-site meetings with customers
- Development scheduling and resources management

FlowX LLC

Full Stack JavaScript Developer / January 2015 - April 2017

For several years, I received various requests to build a wide range of web projects, from simple websites that were mostly HTML5, CSS3 and plain JavaScript to advanced Node.js applications. Lately I have become a big fan of the Meteor/React.js combination and all of the latest SaaS applications I built were based on the Meteor web framework.

- Worked on various projects using some of the latest JavaScript technologies – Node.js, Meteor.js, React.js
- Worked with various APIs to achive customer needs - Google APIs, SMS APIs, Email API, AWS S3 API, Stripe API

Contract - Self-Employed

Full Stack Developer / May, 2014 – January, 2015

In this position, I was a full-time contract developer for small businesses. In my biggest project, I built a SaaS client scheduling system per the customer requirements given to me directly from the business owner, and I was in charge of organizing all of the web assets that the business had.

- Developed and designed a complete client scheduling system using HTML5, CSS3, JavaScript, PHP, MySQL
- Organized all of the web assets belonging to the business
- Improved existing company website
- Built an SEO friendly website for a second business location

Praetorian Digital, Inc.

UI Developer / December, 2011 - May, 2014

As the leading online media company for public safety professionals, Praetorian Group empowers police, firefighters, paramedics and other emergency responders with news and training information to help them protect their communities. As the sole Front-End Developer (UI Developer) at Praetorian Group, I was ultimately responsible for ensuring Praetorian Group's websites were accurately represented on desktop browsers and mobile devices, as well as weekly newsletters.

- Developed new functionality and deliver enhancements to an existing CMS, and fix defects, using JavaScript/HTML/CSS
- Developed standards-compliant and cross-client/browser HTML, CSS, and JavaScript for various projects, focusing on mobile and desktop. Work directly with designers, back-end developers and project managers to create pixel-perfect webpages.

MDK Group, Inc.

Front-End Developer & SEO Specialist / September, 2010 - December, 2011

MKD Group is a group of young professionals who help local businesses be more successful online. Its primary goal is to manage the web design and development process for small businesses to communicate their message. As a Front-End developer I was in charge of listening to the client's requirements as well as come up with my own suggestions through our website design service.

- Designed, developed and maintained database-driven web solutions for local businesses, and reported directly to the owner
- Responsible for all HTML, CSS, and JavaScript production for both new and existing web projects
